Professional Summary

Computer Science senior with a strong focus on data engineering, automation, and practical machine learning applications. Instead of manual low-level coding, I thrive on leveraging modern tools and cloud architecture to build efficient systems from designing ETL pipelines on Azure to automating enterprise workflows with .NET and SQL Server. Looking to apply my cross functional technical skills to deliver clean, production-ready software solutions.

Education

Bachelor of Science in Computer Science

2022 – June 2026

Bahria University, Islamabad

F.Sc. Pre-Engineering

2019 – 2021

Fauji Foundation College for Boys

Professional Experience

C#.NET Intern

March 2026 – April 2026

- Developed a .NET 8 console application using EdiFabric to automate validation and parsing of EDI 837P medical claims from local storage and AWS S3, reducing manual processing effort.
- Designed and implemented SQL Server Express databases with Entity Framework Core, ensuring structured record management and data integrity across multiple storage targets.
- Configured automated database schema migrations using Entity Framework Core, eliminating manual setup steps for new environments.

Technical Skills

- **Programming Languages:** Python, C#, C/C++, SQL, HTML/CSS
- **AI & Machine Learning:** TensorFlow, OpenCV, scikit-learn, Supervised Learning, Model Deployment
- **Cloud & DevOps:** Azure (Data Factory, Blob Storage), AWS S3, Git, CI/CD
- **Frameworks & Tools:** .NET 8, Entity Framework Core, Flutter, Firebase, Pandas, NumPy, Matplotlib, XAMPP, VS Code
- **Core CS & Methodologies:** Object Oriented Programming (OOP), Data Structures & Algorithms, REST APIs, Database Design, Agile Methodologies, Project Management, Research Analysis

Projects

CivicSense (FYP) – AI-Based Civic Issue Reporting App

Python, Flutter, Firebase

- Built a full-stack mobile app enabling citizens to detect and report civic issues (potholes, garbage, broken infrastructure) with real-time complaint tracking via Firebase.
- Trained a custom image classification model achieving 92% accuracy on a self-curated dataset.
- Served predictions through a REST API for real-time inference.
- Implemented geofencing logic to simulate city boundaries and automatically route complaints to the correct municipal department.
- Collected and cleaned the image dataset needed to train the AI model, ensuring balanced class distribution.

EDI 837 Ingestion Pipeline

C#.NET 8, SQL Server, AWS S3

- Automated end-to-end ingestion and parsing of EDI 837P medical claims using EdiFabric, replacing a manual review workflow.
- Designed a multi-database architecture with a duplicate-safe staging inbox and a full archive, ensuring zero data loss and clean separation of validated vs. raw records[cite: 82].
- Automated database schema creation and updates using Entity Framework Core migrations.

Azure Data Engineering ETL Pipeline

Azure Data Factory, Blob Storage, SQL

- Built an end-to-end ETL pipeline using Azure Data Factory to extract, validate, and transform raw data stored in Azure Blob Storage.
- Loaded cleaned datasets into a SQL database, enabling automated reporting and reducing manual data preparation time.

Gym Website (AI Fitness Chatbot)

HTML, CSS, XAMPP

- Designed a visually appealing gym website featuring trainer profiles and interactive content.
- Integrated an AI chatbot to offer personalized fitness plans to users.
- Created secure user registration and sign-in portals.
- Configured XAMPP for robust backend database operations.

Sports Akinator

C++, OOP

- Developed an interactive guessing game using object-oriented programming principles.
- Included a structured database of sports players to drive the guessing mechanism based on real-time user input.
- Implemented complex win-streak and two-strike gameplay mechanics.

Trivia Game

C++

- Built a text-based multiple-choice trivia game leveraging advanced functional logic.
- Implemented custom gameplay components including money counting, lifelines, and real-time score tracking.
- Incorporated strict win-streak and two-strike failure systems.

Certifications

- **Python for Beginners** – LinkedIn (2024)
- **Introduction to SQL** – LinkedIn (2024)
- **Agile Project Management** – IBM (2024)
- **Agile Methodologies** – IBM (2024)

Soft Skills & Competencies

- Critical Thinking & Problem Solving
- Team Collaboration, Leadership, and Teamwork
- Research & Data Analysis
- Basic Project Management

Language Proficiency

- **Urdu:** Mother Tongue
- **English:** Fluent

Research Interests

Artificial Intelligence, Machine Learning, LLMs, Neural Networks, Cryptography, Cryptocurrency, ETFs, and upcoming technologies.
